PROFESSIONAL SUMMARY

Sr. Software Engineer and Team Lead with 7+ years building scalable data systems and architecting CI/CD pipelines using GitLab CI/CD and Git-based version control. Proven track record of cross-functional collaboration with domain engineers to develop visualization tools and analysis platforms in TypeScript and Python, delivering a 40% reduction in processing time. Experienced in AI/ML-driven optimization and focused on mentoring engineers and shaping technical direction.

TECHNICAL SKILLS

Frontend: Svelte, TypeScript, React, JavaScript (ES6+), Angular, Next.js, Redux, HTML5, CSS3, SASS, Tailwind CSS, Responsive Design

SystemDesign: Software architecture, Data systems design, Large-scale data pipelines, Microservices, Headless Architecture, Component Libraries, Design Systems, Scalable Frontend Architecture

Leadership: End-to-end project ownership, Cross-functional Collaboration, Team Management, Agile/Scrum, Code Reviews, Technical Mentoring, Sprint Planning

Backend: Python, Rust, Node.js, Express.js, REST APIs, GraphQL, Golang

Performance: Optimization and statistics, Design of experiments, Web Vitals Optimization, Code Splitting, Lazy Loading, Redis Caching, CDN, Bundle Optimization

Tools: Testing and deployment, Software quality assurance, Git, GitHub, CI/CD, Jest, React Testing Library, Webpack, Vite, Docker, Jira, Figma

PROFESSIONAL EXPERIENCE

Kodo Technologies — Sr. Software Engineer & Team Lead

Aug 2022 - Present | Bangalore

- Raised test coverage from 15% to 80% and reduced production bug rate by 60% by establishing code review standards and CI/CD pipelines across a team of 5 engineers.
- Led corporate credit card onboarding platform that evaluated creditworthiness using financial data and director scores; replaced spreadsheet ops and cut onboarding time by 50%.
- Architected procure-to-pay platform with role-based approval workflows (Form.IO), covering PO creation, vendor selection, invoice generation, and payment via credit cards and virtual accounts; delivered in 6 months against a 12-month estimate.
- Designed and deployed a production-grade agentic AI reporting assistant using LangChain and LangGraph; agent uses RAG pipelines over company invoices, reimbursements, and transaction records with vector search to answer financial queries via natural language chat, eliminating manual report generation.
- Built multi-agent orchestration workflows with tool-use and memory for complex multi-step financial reasoning; applied prompt engineering techniques to improve response accuracy and reduce hallucinations in enterprise financial context.

Artivatic Data Labs — Sr. Frontend Developer & Team Lead

Mar 2021 - Aug 2022 | Bangalore

- Worked with Python-based ML APIs to surface model outputs in Angular UIs; participated in model evaluation cycles and fine-tuning feedback loops; delivered enterprise-grade platform for Wipro serving 500+ users.
- Collaborated with ML engineers to fine-tune and productionize an AI underwriting engine (AUSIS) that scored insurance applications using multi-modal inputs — medical records, financial history, location-based fraud signals, and wearable health data; built Angular UI surfacing model risk scores and recommendations, cutting processing time by 40% per application.
- Led 3 engineers to build shared component library across all AI product UIs; accelerated feature delivery by 35%.
- Integrated computer-vision AI model for vehicle damage assessment; model analyzed uploaded claim videos, detected damaged parts, and predicted repair and replacement costs including labor; enabled faster claims estimates and fraud detection for duplicate or inflated claims.
- Contributed to production insurance fraud detection model integrating behavioral signals, claim patterns, and historical data; built real-time review dashboard visualizing model outputs, fraud scores, and detection reasoning for claims teams.

Swipebucks Softs Pvt. Ltd — *Full Stack Developer*

Apr 2018 - Mar 2021 | Mohali, Punjab

- EdTerra had 20% monthly churn; added blogs, quizzes, and geolocation content features; lifted engagement 40% and reduced churn to 12%.
- Cart abandonment hit 45% at checkout; integrated Stripe and Paytm with unified UX and error recovery flows; raised conversion by 25% and cut payment failures by 40%.
- Site load times reached 3 seconds under traffic spikes; applied Redis caching, query tuning, and CDN; cut load time to under 1.5 seconds and tripled capacity.
- Delivered Houzzcart e-commerce platform in 4 months using Angular 12 and Node.js; launched on time with zero critical bugs.

PROJECTS

AI Voice Lead Qualification Agent (MCP) *MCP, LangGraph, Sarvam AI, Python, WebSocket, REST APIs, LLMs*

Agentic AI system that autonomously calls sales leads via Sarvam AI text-to-voice, conducts dynamic qualification conversations, and scores leads by interest level — enabling sales teams to focus only on high-intent prospects

AI Grocery Orchestration (MCP) *MCP, LangChain, LangGraph, OpenAI API, Claude API, Python, REST APIs*

Multi-agent grocery ordering system using Model Context Protocol; user sets dietary preferences in ChatGPT/Claude, AI generates a personalized meal plan, then autonomously orders required ingredients from nearby stores based on location

Unusual Flow | unusualflow.com

React, TypeScript, WebSocket

Real-time options trading scanner with WebSocket integration for live market data streaming

EDUCATION

NSUT East Campus (AIACTR) — *Bachelor of Technology*

May 2018
